QUESTION NO: 2

GoodCreditLoans is a financial company that wants to create an automated loan approval application. They currently have an application that uses hard-coded logic and manual checks to assess loan applications, generate payment reminders, send marketing emails to potential clients, and create monthly sales reports.

The existing application uses these entities: MarketingContact. Equipment. Loan,

Reminder. Applicant. SalesReport

Here are some example rules harvested during rule discovery for the new automated loan approval application:

if the amount of the loan is less than $10,000,000.00 then the loan is rejected

If the amount of the loan is equal to or more than $10,000,000.00 and the applicant's monthly salary is greater than $175,000.00 then the loan is accepted

What two entities are needed to write the loan approval business rules?

A. Loan

B. Reminder

C. Applicant

D. SalesReport

E. MarketingContact

QUESTION NO: 7

A customer has an online and batch processing application. The batch process can be executed multiple times during the day on demand and can overlap the online application. RuleApps and rulesets are the same across online and batch. The batch application also manages big batches with high throughput.

How can this application be architected to address these requirements?

A. - Use an embedded approach for the online application and batch application to address the high throughput and change the execution units to file persistence to simplify the deployment.

B. - Separate infrastructure from online to batch, each one configured in a separate cluster. - Configure a ruleset interceptor to route the workload between online application execution units and batch execution units.

C. - Configure 2 clusters in the same cell where the online application is running: one cluster for the online application and a second cluster for the batch process. - Configure the Rule Execution Server console outside of the 2 clusters to share the RuleApps across the online and batch application.

D. - Use separate infrastructure for online and batch processing.
- Use managed approach with a centralized Rule Execution Server for online. - Configure a set of J2SE RuleApp clients to run in parallel and distribute the batch workload.
- Change the Rule Execution Server and XU notification mechanism to TCP/IP to use thesame deployed RuleApps for both the batch and online application.
