QUESTION NO:
--------------

What common vendor feature can be enabled to encourage client devices to use a 5 GHz connection instead of a 2.4 GHz connection?

- A. Dynamic Frequency Selection (DFS)
- B. Dynamic Rate Switching (DRS)
- C. Band Steering
- D. Fast BSS Transition (FT)

**ANSWER: C** 

#### **QUESTION NO: 2**

When planning for a bridge link between locations, in addition to the link distance, what requirement should be known in order to determine the antennas, settings and bridges to use?

- A. Required color
- B. Required power sourcing method
- C. Required throughput
- D. Required cable length

**ANSWER: B** 

#### **QUESTION NO: 3**

What network service is used to provide automatic Internet Protocol configuration for network client devices?

- A. DNS
- B. DHCP
- C. ARP
- D. NTP

**ANSWER: B** 

QUESTION NO: 4  For what is the S1G (Sub-1 GHz) PHY (Physical Layer) most likely to be used?  A. Tablets B. IoT (Internet of Things) C. Laptops D. Desktops  ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms B. 100 ms C. 50 ms D. 20 ms
A. Tablets B. IoT (Internet of Things) C. Laptops D. Desktops  ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices? A. 150 ms B. 100 ms C. 50 ms
B. IoT (Internet of Things) C. Laptops D. Desktops  ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices? A. 150 ms B. 100 ms C. 50 ms
C. Laptops D. Desktops  ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms B. 100 ms C. 50 ms
D. Desktops  ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
ANSWER: B  QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
QUESTION NO: 5  What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
What is the maximum latency or delay requirement in milliseconds for many voice over IP (VoIP) devices?  A. 150 ms  B. 100 ms  C. 50 ms
<b>A.</b> 150 ms <b>B.</b> 100 ms <b>C.</b> 50 ms
<b>B.</b> 100 ms <b>C.</b> 50 ms
<b>C.</b> 50 ms
<b>D</b> . 20 ms
ANSWER: A
QUESTION NO: 6
Which one of the following is an example of a multi-band device?
A. A laptop supporting only 802.11n in 2.4 GHz
<b>B.</b> A laptop supporting 802.11n, 802.11ac, and 802.11ad
C. A laptop supporting only 802.11n in 5GHz
<b>D.</b> A laptop supporting only 802.11a
ANSWER: B

#### **QUESTION NO: 7**

In a highly-reflective environment, what result can have a negative impact on SISO 802.11 devices?

**A.** 160 MHz

A. Increased signal strength
B. Multipath
C. Phase shifts
D. Increased bits in the signal
ANSWER: B
QUESTION NO: 8
What 802.11 fast roaming solution allows a client to authenticate to a different AP than that to which it is connected through the AP to which it is connected?
A. Role-Based Access Control (RBAC)
B. Preauthentication
C. Captive Portal
D. Virtual Private Network (VPN)
ANSWER: B
QUESTION NO: 9
When open public Wi-Fi access is provided, what can be implemented to help prevent attacks between devices connected to the same AP?
A. WPA2
B. WPA
C. Device-to-device communication blocking
D. WEP
ANSWER: C
QUESTION NO: 10
What channel width rarely, if ever, should be used in the 2.4 GHz frequency band, even though it is supported by the
standard and available devices?

- **B.** 20 MHz
- **C.** 22 MHz
- **D.** 40 MHz

**ANSWER: A**
