ANSWER: B C

QUESTION NO: 8

While working in Dev1 Debbie has committed a new custom field "Amount" and a validation rule

"Mandatory Amount" in the same user story. Later, during the sprint, the business analyst decided

that the validation rule should not be included in this sprint but rather moved to the next sprint.

Nonetheless, the custom field must remain and be delivered in the current sprint. How can

Debbie

accomplish this?

A. On the same user story, use the Destructive Changes Git operation to delete the validation rule.

B. Delete the user story, create a new one and commit only the custom field as retrieve only this time.

C. On the same user story, use the Recommit Files Git operation and deselect the validation rule.

D. On the same user story, use the Recommit Files Git operation, check the Re-Create
Feature Branch checkbox, deselect the validation rule and recommit.

ANSWER: D

QUESTION NO: 9

What is the minimum Apex code coverage on a user story?

A. The minimum test code coverage you specify on the environment.

B. The minimum test code coverage you specify on the org credential.

C. 75%, which is the minimum code coverage required by Salesforce.

D. 85%, which is the minimum code coverage required by Salesforce.

ANSWER: C

QUESTION NO: 10

The development team is complaining that when they try to select a metadata source in the scratch org wizard, they can only see Branches. Developers should be able to select

any metadata source. How you can fix this?

A. Set the Copado DX Mode picklist field in the Pipeline record to 'All Metadata Sources'.

B. Set the Copado DX Mode picklist field to 'Branches' in all the environments.

C. Give the developer profile the correct object level permissions to all metadata sources.

D. Set the Copado DX Mode picklist field in the Pipeline record to 'None'.

ANSWER: D
