#### **QUESTION NO: 1**

Why would you develop an SQL procedure instead of a function? Note: There are 3 correct answers to this question.

- A. You want to create a dynamic analytic privilege.
- **B.** A temporary table must be created within the code.
- **C.** Optimal performance is a priority.
- **D.** The code should modify data in a table.
- **E.** You need to use conditional logic.

#### **ANSWER: A B D**

#### **QUESTION NO: 2**

What are the consequences of NOT executing a delta merge? Note: There are 2 correct answers to this question.

- A. Aggregates are not adjusted.
- B. New records are not read.
- C. Read performance decreases.
- **D.** Memory is not optimized.

#### ANSWER: A D

#### **QUESTION NO: 3**

What is a restricted measure?

- **A.** A measure that cannot be referenced by a calculated column.
- **B.** A measure that can only be displayed by those with necessary privileges.
- **C.** A measure that is filtered by one or more attribute values.
- **D.** A measure that can be consumed by a CUBE and not a DIMENSION.

#### **ANSWER: C**

#### **QUESTION NO: 4**

You have generated a calculation view properties file. What does it contain?

- A. Descriptions of all objects defined in a calculation view
- **B.** All settings defined in a calculation view
- C. Dependencies between calculation views
- **D.** Documentation to support the calculation view

#### ANSWER: A

#### **QUESTION NO: 5**

What does SAP HANA provide to support full stack native application development? Note: There are 2 correct answers to this question.

- A. Code editors and debugger
- B. Support for automated regression testing
- C. Source code version management tool
- D. Incident tracking tools

#### **ANSWER: A C**

#### **QUESTION NO: 6**

What are the limitations of using a full outer join in a star join node? Note: There are 2 correct answers to this question.

- A. It must appear in the last DIMENSION in the star join node.
- **B.** It CANNOT be mixed in the same star join node with other join types.
- **C.** Only one column can be included in the join condition.
- **D.** It is restricted to one DIMENSION in a star join node.

#### **ANSWER: A D**

#### **QUESTION NO: 7**

You have imported a new calculation view in a folder that contains an .hdinamespace file. This calculation view consumes one data source, which is a table. When trying to build the calculation view, the build fails with a namespace-related issue. What could be the reason? Note: There are 2 correct answers to this question.

**A.** The imported calculation view and its data source have different namespaces.

- **B.** The namespace used within the calculation view to reference the table is different from the actual namespace in the identifier of this table.
- C. The .hdinamespace specifies "sub-folder": "append", so calculation views can only be created in subfolders.
- **D.** An .hdinamespace file is defined in the SRC folder that specifies a different namespace property than the one in the identifier of the calculation view.

**ANSWER: A B** 

#### **QUESTION NO: 8**

You combine two customer master data tables with a union node in a calculation view. Both master data tables include the same customer name. How do you ensure that each customer name appears only once in the results?

- A. Define a restricted column in a union node.
- B. In the union node, map both source customer name columns to one target column.
- **C.** Include an aggregation node above the union node.
- **D.** Add an intersect node above the union node.

ANSWER: C

#### **QUESTION NO: 9**

When modeling in the SAP Web IDE for SAP HANA, which object do you build to provide access to tables in external schemas?

- A. Virtual Table
- **B.** Synonym
- C. Association
- D. Alias

**ANSWER: B** 

#### **QUESTION NO: 10**

What is the SQL keyword used to process input parameters defined in a calculation view?

- A. Hint
- B. Placeholder

- C. Where
- D. Set

**ANSWER: B**
